The Sun's Energy Harvested Day & Night

Breakthrough in Clean Power **\$10 MWh**, plus cheap Water, and Green Hydrogen

Dear Elon,

As a former **NASA DIRECTOR**, and **CEO of the United States Home Laboratory aboard the International Space Station**, and present Board of Directors for Ion Power Group LLC, I am pleased to introduce a revolutionary technology poised to redefine how civilization produces **electricity, hydrogen, and water** — cleanly, continuously, and affordably, day and night as low as **US\$10 MWh**.

Ion Power Group (IPG) is a global consortium of scientists, engineers, and business innovators with **patents secured in 20 countries**. Our proprietary technology harvests renewable electrical energy directly from the **Earth's Global Electric Circuit — day and night, even during storms**. In short, we've proven a way to capture the planet's natural, continuous atmospheric energy — the sun's electricity — around the clock.

This advancement has the potential to deliver electricity at **costs as low as \$10 per MWh**, while also enabling scalable **green hydrogen and water generation**. Predicted to be cheaper than all existing power sources, we believe Ion Power represents one of the most significant clean-energy breakthroughs since the early days of solar and wind. Also, will produce electricity on up to 10 planets and moons, including Mars, as well as provide EMP mitigation here on Earth.

Your investment focus on disruptive, high-impact clean technologies aligns perfectly with Ion Power's mission. We would welcome the opportunity to explore collaboration or partnership as we move into our next major research phase — **Phase 5B**, conducted in collaboration with **Mississippi State University**.

For a concise overview of our technology and global potential, please review our presentation here:

 [ION Power Group Deck \(Dec 2025\)](#)

Our leadership team includes a former **United States Secretary of Energy**, senior **U.S. military officers**, and multiple **PhD scientists**. Together, we believe Ion Power's technology is positioned to reshape global energy markets and address humanity's most urgent challenges.

I would be delighted to host a video conference with you and your team to discuss how Ion Power's technology can accelerate your goals in clean power, EVs, and Mars colonization while advancing a sustainable future for all.

With respect and anticipation,

Ray Lugo - Board of Directors
